

Solution Requirements

Date	01 July 2026
Team ID	To Be Assigned
Project Name	Credit Card Approval Prediction
Maximum Marks	4 Marks

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority
1	Authentication	The system shall provide secure administrator access for model management and analytics viewing.	High
2	Authorization Levels	Users can submit applications while administrators can access reports and performance dashboards.	High
3	External Interfaces	The Flask application shall communicate with machine learning models and dataset storage systems.	High
4	Transaction Processing	Applicant information shall be validated, preprocessed and evaluated in real time.	High
5	Reporting	The system shall generate approval probability, confidence score and risk reports.	Medium
6	Business Rules	Approval decisions depend on age, income, employment duration and repayment history.	High
7	Compliance	Applicant information shall be handled securely and according to privacy practices.	Medium
8	Other	The system shall support multiple machine learning algorithms and model comparison.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	The application shall provide quick response and prediction generation.	Prediction generated within 2 seconds.
2	Scalability	The system shall support increasing users and application volume.	Support more than 1000 applications per day.
3	Security & Data Privacy	Sensitive applicant information shall be protected and securely stored.	Secure communication and protected storage.
4	Reliability & Availability	The service shall remain consistently available for users.	99% monthly uptime.
5	Usability & Accessibility	The interface shall be simple, responsive and easy to use.	Works on desktop and mobile devices.
6	Other	The application shall support easy maintenance and deployment.	Simple updates and portability.
