

Project Initialization and Planning Phase

Date	01 July 2026
Team ID	To Be Assigned
Project Title	Credit Card Approval Prediction
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) Report

The proposed solution improves credit card approval decisions using machine learning to provide faster, more accurate and consistent predictions while reducing manual effort and approval delays.

Project Overview	
Objective	Develop a machine learning based system capable of predicting whether a credit card application will be approved or rejected.
Scope	The project covers preprocessing, feature engineering, model training, evaluation and deployment using Flask.
Problem Statement	
Description	Traditional approval processes are slow, require manual verification and may lead to inconsistent decisions.
Impact	The solution reduces processing time, improves operational efficiency and increases customer satisfaction.
Proposed Solution	
Approach	Use Logistic Regression, Random Forest, Decision Tree and XGBoost models to evaluate applications.
Key Features	• Real-time prediction • Multiple ML models • Flask web interface • Analytics dashboard • Reduced manual effort
