

Coding & Solution

Date	01 July 2026
Team ID	To Be Assigned
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Solution Summary

Field	Details
Repository Link / URL	GitHub repository to be added after final submission.
Programming Language(s)	Python, HTML, CSS
Framework(s) Used	Flask, Scikit-learn, Pandas, NumPy, Matplotlib
Key Features Implemented	• Credit card approval prediction • Real-time predictions • Input validation • Model comparison dashboard • Responsive UI
Pending / Incomplete Features	IBM Cloud deployment and advanced analytics dashboard.
Setup / Run Instructions	Install requirements.txt, run train_model.py, then execute app.py using Flask.

Code Quality Checklist

S.No	Criteria	Status
1	Code is modular and organized into functions/classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments/documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	Application runs without critical errors	Yes
6	Code is committed to a version control repository	Partial

Additional Notes / Comments

The project follows a modular Flask architecture with separate folders for templates, static assets, datasets and trained models. The implementation focuses on maintainability, readability and reusability.
