

Date	01 July 2026
Team ID	To Be Assigned
Project Name	Credit Card Approval Prediction
Maximum Marks	1 Mark

S.No	Limitation	Impact	Priority to Address
1	Synthetic dataset used instead of real banking records.	Model performance may differ when applied to real-world financial datasets.	High
2	Application currently supports only local Flask deployment.	Cannot efficiently handle a large number of concurrent users.	Medium
3	Limited authentication and security mechanisms.	Production deployment requires stronger security controls and monitoring.	High

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Supports local users and testing environment.	Deploy on cloud infrastructure with load balancing and auto-scaling support.
2	Data Storage	CSV dataset and PKL model files are currently used.	Migrate to SQL or NoSQL databases for handling larger datasets.
3	Performance	Single-machine execution environment.	Introduce caching and optimized inference pipelines for faster predictions.
4	Security	Basic input validation mechanisms available.	Implement authentication, HTTPS encryption and access control policies.

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Cloud deployment and online accessibility.	3 Months	Enable access for multiple users simultaneously.
Phase 2	Integration with real banking datasets.	6 Months	Improve model accuracy and reliability.
Phase 3	Advanced ML models and explainable AI features.	9 Months	Provide transparent and interpretable predictions.
Phase 4	Mobile application and API integration.	12 Months	Increase usability and business adoption.
